64-6 Mustang Second
Design Instructions

92972204 rev. 0.0 7/30/2018

WARNING:

Validate the kit contents with the component list included on this page, before proceeding. This kit is intended to be used in a modified vehicle. Please read this page thoroughly and be sure that you understand everything explained on it prior to opening any of the enclosed packages, or before attempting to install any of the components. Once this kit has been opened or a component installed, the kit is not returnable.

This kit should typically be used in a **MODIFIED 1964-1966 Mustang** application only.

Some early production 1964 1/2 Mustangs used a unique headlight switch assembly that utilized a shorter knob and shaft assembly than the later production 1965 - 66 cars used (3.63" vs. 3.90"). The new AAW switch included with this kit is an exact replacement for the later 1965-66 cars and needs the later production style knob and shaft in order to operate. If your car is an early production 1964 1/2 model, you will need to purchase the newer long style knob and shaft assembly from your favorite Mustang parts supplier as your original will be too short to operate the new AAW switch assembly.

This kit **DOES NOT** support the use of the stock generator warning lamp. A voltmeter is recommended as a good source to monitor your charging system.

This kit only supports the use of a higher current self-exciting 1 wire, or other style internally regulated alternator. An adapter may be necessary for certain applications. **No stock alternators are supported.**

This kit **WILL NOT** support the use of a factory ammeter. All AAW kits are engineered to supply the optimum charge to the battery. To achieve this performance, we route our 6ga. charge wire directly from the alternator output terminal to the starter solenoid. Due to the path of the charge being altered from the stock configuration, the gauge can no longer see a charge vs. a discharge, so it will not work properly. When ammeters were originally used, most generator alternator current outputs were rated at maximum of about 25-60 amps. Modified cars being built today typically utilize a 100 amp or higher output alternator. With these higher current units, ammeters, generally speaking, become a safety hazard. Ammeters are usually wired in parallel to the charging circuit, are electrically unused, and can short very easily causing a fire. A voltmeter is recommended as a good alternative.

This kit **WILL NOT** support the use of a factory tachometer in its original connection application as those tachs wired the primary ignition circuit directly in series through the tach and then out to the positive side of the coil. With this type of connection, any type of MSD or high energy ignition will generally destroy the internal circuitry of the tach and will cause the car to quit running as voltage will no longer flow through the tach and out to the coil or ignition control unit. **HOWEVER**, if your factory tach has been upgraded or retrofitted to a later style movement where the pulse post on the tach gets wired to the negative side of the coil (or to the tach output on an MSD box or similar unit) and the feed post of the tach uses a conventional 12 volt ignition connection, **you will be able to use this harness system.**

This kit **IS NOT** set up with a resistance wire for a standard, points type ignition system. It is wired with a full 12 volt primary ignition feed that is hot in both start and run positions. It will support HEI, MSD, other electronic ignition systems, as well as computerized Fuel Injection systems. If you wish to run a points type system, there are illustrations on the engine connection pages to do so. Extra parts that are not included in this kit will be required to complete that operation.

510125 - Classic Update Series Kit 1964-66 Mustang

This kit contains the following components:

Bag	Part Number	Description	Quantity
	510054	Headlight Switch	1
	510469	Fuse, Relay, and Flasher kit	1
	500042	Dimmer Switch	1
	510128	Ignition Switch	1
	500919	Practice Terminal Crimping Set	1
G	510467	Dash Harness Kit	1
H	510461	Instrument Cluster wiring kit	1
J	510466	Engine Wiring Kit	1
L	510465	Front Light Wiring kit	1
M	510468	Rear Body Wiring kit	1
Z	510476	Alt. & Main Power Connection Kit	1

Validate the kit contents with this component list. If there are any discrepancies with incorrect or missing parts, stop your installation and notify the supplier you purchased the kit from before proceeding.

START HERE!

PLEASE READ THIS BEFORE STARTING INSTALLATION!

This wiring kit is designed for ease of installation. Please read the guidelines below, BEFORE STARTING your installation, to guarantee a successful job. Use an appropriate crimping tool, which folds the wings of the open barrel terminals down into the wire, as shown on this page. If you use our crimping tools and correctly crimp the included terminals, soldering is not necessary. If you are unsure about a particular crimp, soldering is recommended. Our factory crimped terminations are installed by M approved five ton presses, and soldering these terminations is not necessary.

AW offers a great terminal crimping video entitled "Proper Crimping Video". It can be viewed by visiting YouTube.

Type the following address into your web browser, to go directly to the video:
www.youtube.com/watch?v=JAgEDoVI-co

YouTube Channel:
www.youtube.com/user/WiringHarness

The terminals that we supply in our kits, utilize what is known as an F crimp. The F crimp in a cross section, will look like the illustration below, when done correctly.

We carry the following crimping hand tools, to help with your terminal crimping. These hand tools are available, for purchase or rental.

p/n 510585
OEM small terminal crimping tool (18-14 gauge)

p/n 510587
Includes Both terminal crimping tools

p/n 510586
OEM large terminal crimping tool (12-8 gauge)

We carry many accessories for your 1964-66 Mustang:

p/n 510175
factory hazard switch wiring kit

p/n 510127
ignition switch lock cylinder and keys

p/n R0067108
OEM style non-stick harness tape

STEP 1: DISCONNECT YOUR BATTERY:

Disconnect the battery, before installing the wiring kit, to prevent any accident shorting caused by loose bare wire ends.

www.americanautowire.com 856-933-0801

If you have any questions concerning this or any of our products, please feel free to call us at 1-856-933-0801.

1964-66 Mustang

Classic Update Serie

510125

92972102 Rev 5.0 6/23

STEP 2: START INSTALLING KIT:

This kit is broken down into individual sections, that are identified by a letter printed on the enclosed sheets, visible through each bag. The order of installation and the pages with their installation instructions, are shown below:

Table of Contents:

Pages: Sections:

4 - 9 Dash Harness - This is the main harness in the kit and contains:

- Heater feed and switch connections.
- Door jamb switch and door courtesy feed connections.
- Ignition, lighting, dimmer switch and wiper feed connections.
- Neutral safety and back up light switch connections.

10 - 14 Gauge Cluster Harness - This Harness contains:

- Gauge connections for aftermarket and factory gauges.

15 - 16 Engine Harness - This Harness contains:

- Temperature, oil pressure, tachometer wiring.
- Ignition system / ECU power.
- Alternator connections.
- Starter solenoid connections.
- Main panel feed connections.

17 - 18 Front Light Harness - This Harness contains:

- Headlight, turn signal, running light connections.
- Electric fan relay trigger.
- Fog light connections.
- Brake warning light connections.
- Horn connections.

19 - 20 Rear Body Harness - This Harness contains:

- Tail light, turn signal, reverse light, running light and third brake light connections.
- Fuel tank sender connections.
- Dome light connections.

Dash/Main harness installation instructions:

own below, are the supplied misc. terminals, plastic connector bodies, hardware, jumpers and extensions, included in the Dash/Main Harness and Loose Piece bags, that will be used to complete your Dash/Main harness connections. They are itemized and referred to on this page, just as they are on the following pages of this Dash/Main instruction set.

(56 series double female terminal, 8 pcs.)

(56 series single female terminal, 3 pcs.)

(Pack-Con 14-way male connector, 1 pc.)

(Pack-Con male terminal, 11 pcs.)

(fuse panel mounting bracket, 1 pc.)

(1" fuse box mounting screw, 2 pcs.)

(1/4" lock washer, 2 pcs.)

(8-32 x 9/16 Phillips screw, 3 pcs.)

(8-32 locking nut, 3 pcs.)

K (#10 flat washer, 3 pcs.)

L (male bullet terminal, 3 pcs.)

M (small rubber sleeve, 3 pcs.)

N (routing clip, 2 pcs.)

P (grommet, 2 pcs.)

R (door jamb switch, 2 pcs.)

T (3-way female connector, 1 pc.)

U (58 series single female terminal, 5 pcs.)

V (58 series single female connector, 1 pc.)

W (single female terminal, 2 pcs.)

Y (large rubber sleeve, 1 pc.)

BB (NSS jumper wire for manual trans, 1 pc.)

CC (NSS wires from dash connection to switch, 2 pcs.)

DD (1964-68 high speed blower wire, 1 pc.)

EE (1964-65 low speed blower wire, 1 pc.)

FF (Courtesy Light Wiring Extensions, 2 pcs.)

GG (B/U wires from dash connection to switch, 1 pc.)

dash/Main fusebox /bracket/ harness assembly mounting instructions:

www.americanautowire.com 856-933-0601

1964-66 Mustang
Classic Update Series
510125 92972102 Rev 4.0 5/8/18

Make sure you have installed all of your fuses into the fusebox. Assemble the mounting bracket to the fusebox and harness assembly as shown in step #1 on this page.

Attach completed "bracket, fusebox and harness assembly" into the vehicle as shown in steps #2 through #6 on this page. Plug H-L switch 510054 into harness connector and install into your dash. Plug your existing wiper harness into the white per feed wire on the AAW dash harness, onto your existing wiper switch and over to your wiper motor.

Plug ignition switch 510128 into harness connector, attach brown wire with ring terminal to threaded stud, plug tan wire onto round blade of the ignition switch and install completed assembly into your dash. Plug in your cigar lighter connection.

Route the front light and dimmer connections back around the fresh air vent so that the front light connections are at the pass-through hole in the firewall, then route the dimmer connections down to the floor area and attach to dimmer switch 00042. Secure dimmer switch to the toeboard/floor. Plug in front light wiring 510465. After installing firewall grommet "P" in the opening, route wires out to the engine bay. See pages 18 and 19 for details.

Drop rear body connector down inside the door hinge pillar to the floor. Plug your in rear body harness 501468, then it route along the door sill back to the trunk area. See pages 20 and 21 for connection details.

Plug brake switch connection onto your existing brake switch.

From page 10, assemble NSS and BAU switch extension and plug onto dash harness connection.

Route the engine connections to the pass-through hole in the firewall. Plug in engine harness wiring 510466. After installing firewall grommet "P" in the opening, route wires out to the engine bay. See pages 16 and 17 for details. Make LH door switch and courtesy/lamp (to right of column) connections. See pages 6 and 9 for details.

Plug in your steering column connections. See page 8 for details.

Build your gauge cluster harness and plug the finished assembly into the dash harness connections as shown on page 6. See pages 11-15 for details on building your cluster harness. Please note that there are several different choices and be sure you have picked the proper choice for your car's application.

Mount relay bank to wiper motor support bracket. See template 92972156 for instructions and details.

Build your heat and A/C connections. See page 10 for details.

Pass remaining harness over past the radio and heater controls to the RH side of the car. Make radio, console, glove box, door switch and courtesy lamp connections as necessary. See pages 7 and 9 for details.

1. Assemble the mounting bracket to the fuse-loaded fusebox and harness assembly using screws, washers and nuts "H, J and K" found in the 92972060 dash loose piece kit.

2. Using mounting template and instruction sheet 92972154, drill a new .125 mounting hole in the door hinge pillar area.

With the cluster assembly and all the original wiring removed, lay the assembled "bracket, fusebox and harness assembly" from step 1 across your steering column as shown above.

4. Tuck the "bracket, fusebox and harness assembly" down inside the dash opening, and using screws and washers "F and G" found in the 92972060 dash loose piece kit, attach the assembly to the LH door hinge pillar area. Carefully route the harness to avoid any sharp edges on the LH vertical dash support so that you do not cut or chaff any wires.

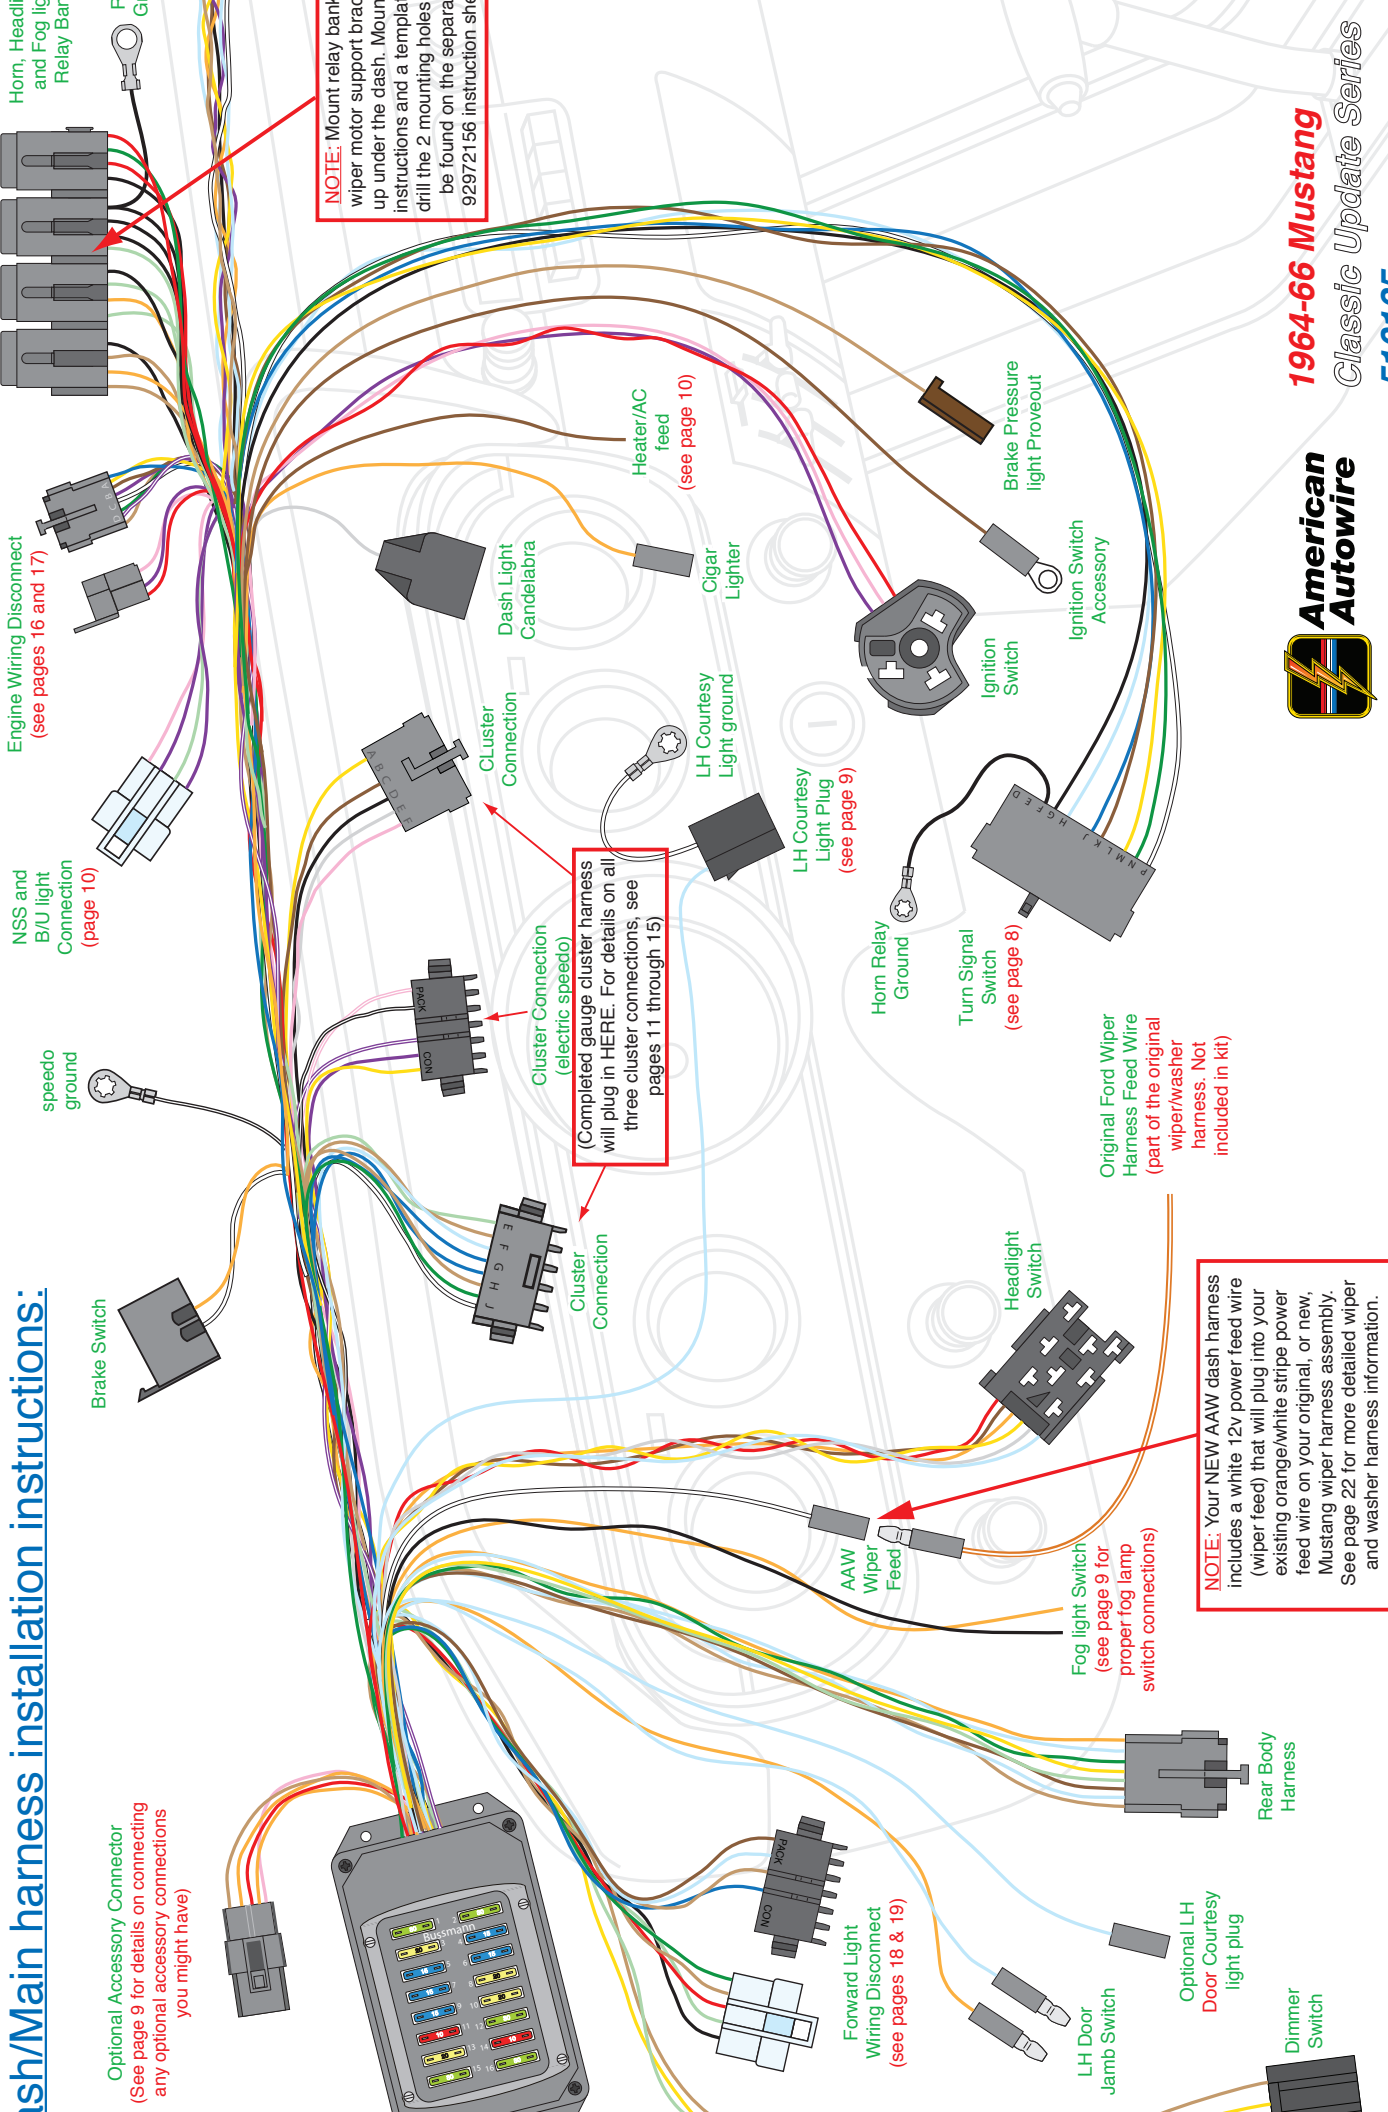

5. Install the two harness routing clips "N" into the original holes near the top of the two vertical dash supports as shown above.

6. Snap the main harness into the two new harness routing clips "N" so that the harness routes over the cluster opening area as shown above. After you plug your wiper harness into the white AAW "wiper feed" wire from page 6, you can snap that harness into the two mounting clips as well.

Light Blue	Left Front Turn	H	Dk. Green/White
Black	Horn Relay Ground	G	Dk. Blue/Yellow
Black	Horn Relay Ground	F	Not used for 64 application
None	None	E	
None	None	D	
None	None	A	

Red - Not Used)

Remove the original Turn Signal Switch Connector and replace it with the AAW 14-way connector "A". Crimp on terminal "B" to each of the original Turn Signal Switch wires and plug them into connector "A" (see Parts Kit 92972060). (NOTE: Some replacement turn signal switches have a red wire in them that will not be used in this application)

Use "Table B" above to align the wires. Also, for all of the 64 vehicles, the Steering Column Horn Button switches ground for the Horn Relay, which then switches power to the horns, exactly as original.

"Table B"

AAW Turn Signal Switch wires to stock **1965-66** Ford Mustang Turn Signal Switch

None	None	E	
None	None	D	
None	None	A	

(Red - Not Used)

Remove the original Turn Signal Switch Connector and replace it with the AAW 14-way connector "C". Crimp on terminal "D" to each of the original Turn Signal Switch wires and plug them into connector "C" (see Parts Kit 92972060). (NOTE: Some replacement turn signal switches have a red wire in them that will not be used in this application)

"Table B" above to align the wires. Also, for all of the '65-'66 vehicles, the Steering Column Horn Button switches ground for the Horn Relay, which then switches power to the Horns.

ORIGINAL TURN SIGNAL SWITCH WIRING

AMERICAN AUTOWIRE DASH HARNESS CONNECTION

DIAGRAM 'A' - AAW Turn Signal Switch Wires to Stock 1965-66 Steering Columns.

americanautowire.com 856-933-0801

Dash/Main harness installation instructions:

Accessory connector wiring:

the provided 6-way empty connector, which is attached to the 6-way Accessory connector on the Dash Harness, and terminals "A" or "B" to add power wires (not included in kit) for the following optional system

Wire Color	Printing	Fuse #	Fuse Block Cover	Fuse rating	Description
Orange	FUEL PUMP	10	Fuel Pump	20A	Fused 12 volt IGNITION feed for fuel pump (may also be used to feed power to another ignition circuit).
Red	POWER SEATS	2	Pwr Seats	30A	Fused 12 volt BATTERY feed for power seats (may also be used to feed power to another battery circuit).
Yellow	POWER LOCKS	8	Pwr Locks	15A	Fused 12 volt BATTERY feed for power door locks (may also be used to feed power to another battery circuit).
Green	POWER WINDOWS (No Printing)	15	Pwr Window	30A	Fused 12 volt ACCESSORY feed for power windows (may also be used to feed power to another accessory circuit).
Blue		7	Bat-Spare	30A	Fused 12 volt BATTERY feed (may also be used to feed power to a battery circuit).

6-way empty connector (removed from Dash harness connector) and terminals, used to connect your power wires (not included in kit) to the dash harness

Courtesy light wiring:

Connect the (2) courtesy light wiring extensions "FF" to the courtesy light plugs from the dash harness: The left-hand courtesy plug is at the same branch as the headlight switch, and will mount to the right of the steering column along the bottom of the dash. The right-hand courtesy plug is at the far end of the dash harness, near the glovebox lamp connection and RH door jamb switch connection, and will mount along the bottom of the dash. The (2) courtesy light wiring extensions are found in the dash loose piece bag, part number 92972061.

Fog light switch wiring:

Ford Wires

NOTE: The factory Ford fog lamp switch utilized 3 wires: blue with a black stripe, gray, and black. For this application, the AAW orange wire will be connected to the original Ford blue with black stripe wire, and the AAW black wire will be connected to the original Ford gray wire. The original Ford black wire will not be used in this application and should be capped off.

NOTE: You can use the blue butt-splice connectors found in the 92965220 cluster kit to make these connections if necessary

Connect this black "FOG LAMPS" wire to your fog light power wires. If the fog lights have separate ground wires, you must supply them as they are not included in this kit

existing turn signal wires (not included in kit)

to chassis ground

Rear Body harness installation instructions:

Shown below, are the supplied misc. terminals, plastic connector bodies, clamps and wire extensions, included in the Rear Body Harness and those Piece bags, that will be used to complete your Rear Body harness connections. They are itemized and referred to on this page, just as they are on the following pages of this Rear Body instruction set.
