

Dual Exhaust 5277 Frame Mounting Template
 1965-1966 (1967-1970 similar)
 Passenger Side Rear Frame Rail, Inner Side
 REVERSE for drivers side frame rail
 Scale: 1" = 1"
 by Scott Halseth, National Parts Depot
 5/11/2021

Frame rail upper flange and trunk floor.
 Fold or cut template on this line.

Crush tube hole note:

Hole size is at your discretion. The original hole size in the frame rail was approximately 9/16". The hole must fit a 3/8" Carriage bolt and be smaller than the 3/4" diameter flange nut.

Disclaimer: Measurements were taken on an assembled car while on my back. The measurements may not be exact but the placement of the 5277 exhaust hanger bracket is not super critical and it does have slots for adjustment.
